

## MonoDAQ-E-STG

MonoDAQ-E-STG is a single channel strain gauge amplifier with internal quarter-, half- and full-bridge configurations. Low noise voltage and current source excitation are available with freely settable levels. Input ranges span from 50 V to 100 mV. Data is transferred over EtherCAT to a PC running powerful and easy to use DEWEsoft data acquisition software ([www.monodaq.com](http://www.monodaq.com)).

Key features:

- Internal bridge completion (quarter & half, 120 & 350 ohm)
- 50 V to 100 mV input voltage ranges
- 20 mA current input range (internal shunt)
- Settable voltage and current excitation (max 400 mW)
- Low noise, high dynamic performance
- Signal and power isolation from EtherCAT to front-end
- EtherCAT bus, daisy-chaining with single cable up to 50 m device-device
- DEWEsoft X3 software support

Typical applications:

- Material strain measurements
- Precise weighting
- Structural load monitoring

**Installation:** Devices are daisy chained with a standard network cable. It is recommended that the cable is shielded (SFTP, CAT5e) and has a minimum 24 AWG wire thickness. The cable must have 4 wire pairs. The maximum distance node-to-node is 50 m.

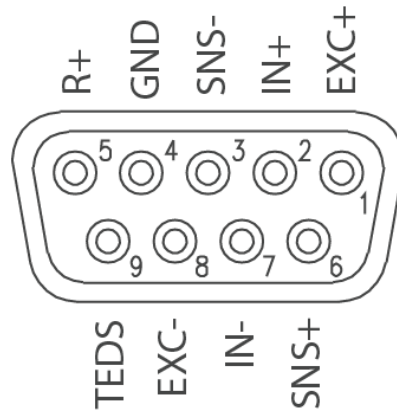

Power supply: Passive PoE injector is necessary for merging the EtherCAT signal and power into a single cable.

Power supply voltage	Cable length device-to-device	Cable size	Max. number of devices from a single power supply
24 V	1 m	AWG 24	4
24 V	50 m	AWG 24	3
48 V	1 m	AWG 24	10
48 V	50 m	AWG 24	6

Note: this table applies if device consumes its typical power supply as specified in general specification. The max. nr. of devices from a single power supply can change if devices uses more/less power (depending primarily on sensor exciation and front end power supply load).
